ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: FINE PARTICLE POWDER PRODUCTION

(57) Abstract: The present invention relates to a vapourised flow quenching reactor for producing a fine-powder from one or more reactant materials. The reactor comprises a first heat creating means selected from one of a DC plasma torch (4) and RF plasma torch (3), a first reaction chamber (5) within which energized reactant materials react and a first convergent-divergent nozzle (6) for quenching the heated reactant materials from the first reaction chamber (5). The reactor also comprises a second reaction chamber (8) provided for congregation of nano particles formed therefrom and a second convergent-divergent nozzle (9) to deliver the nano particles to a collection chamber (11).
